22 January 1965

MEMORANDUM FOR: Deputy Director for Science and Technology

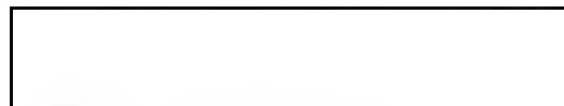

Bud,

1. The DCI handed the attached report on U-2 reconnaissance missions T314A, T324A and T344A to me and said that he felt this report went beyond what was required and got into substantive intelligence which should be handled either in a NPIC report or through another vehicle. You will note that he has underlined several passages which he takes exception to.

2. My own comment is that I think it unfortunately mixes operational information and substantive information, and we have conscientiously tried to avoid this in the Agency.

3. I don't want to make a federal case of this and rekindle some of the interface fires between DD/I and DD/S&T, but I do feel he has got a good point here. On the other hand, I believe the interface agreement is working quite well now. Let's discuss it before either of us does anything further.
